

SER 321 A Session

SI Session

Wednesday September 27th 2023

6:00 - 7:00 pm MST

Agenda

Middleware

What is it?

Why do I care?

Assignment 6

SI Session Expectations

Thanks for coming to the **SER 321** SI session. We have a packed agenda and we are going to try to get through as many of our planned example problems as possible. This session will be recorded and shared with others.

- If after this you want to see additional examples, please visit the drop-in tutoring center.
- We will post the link in the chat now and at the end of the session.
 - tutoring.asu.edu
- Please keep in mind we are recording this session and it will be made available for you to review 24-48 hours after this session concludes.
- Finally, please be respectful to each other during the session.

Interact with us:

Zoom Features

Zoom Chat

- Use the chat feature to interact with the presenter and respond to presenter's questions.
- Annotations are encouraged

SER 321

OSI Model - Middleware

So far we have been focused
pretty much on a single layer

We are *manually* creating
specifications and *manually*
constructing our payloads

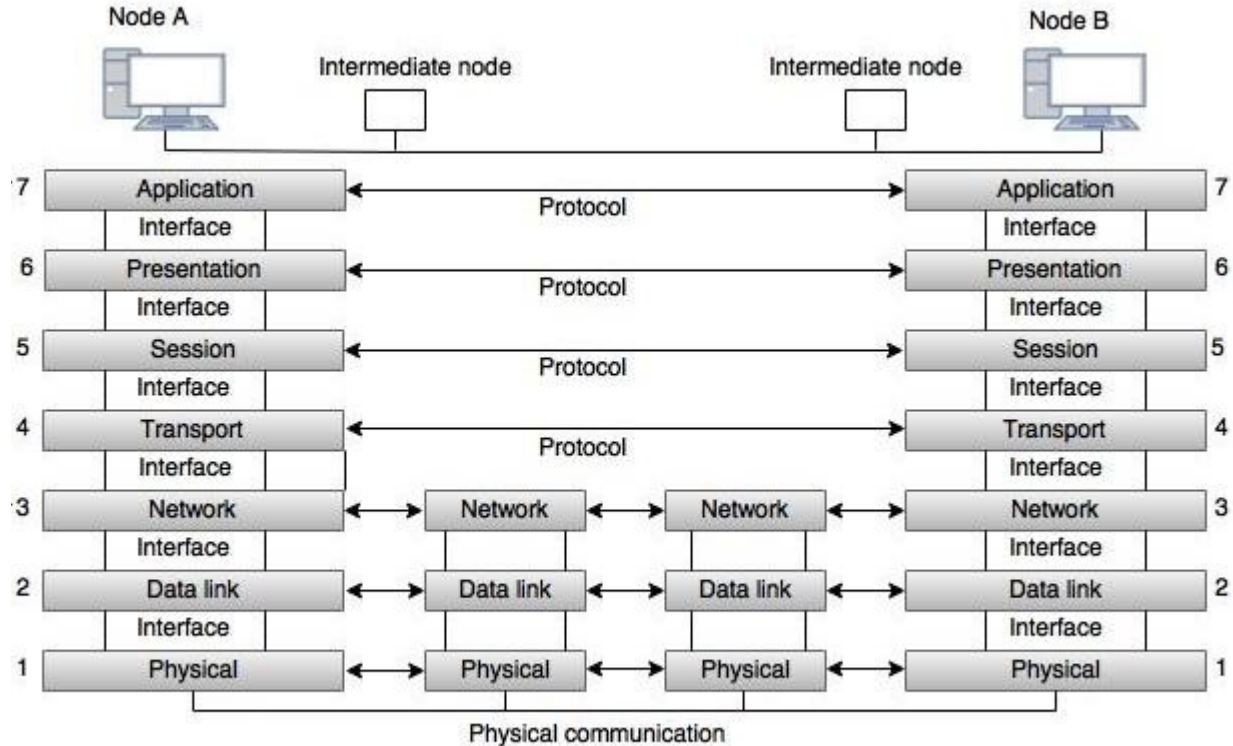

Fig: OSI Model

SER 321**OSI Model - Middleware**

Client:

Construct JSON request
Send to server
Wait for response
Parse JSON response

Server:

Receive JSON request
Parse JSON request
Handle accordingly
Create JSON response
Send to Client

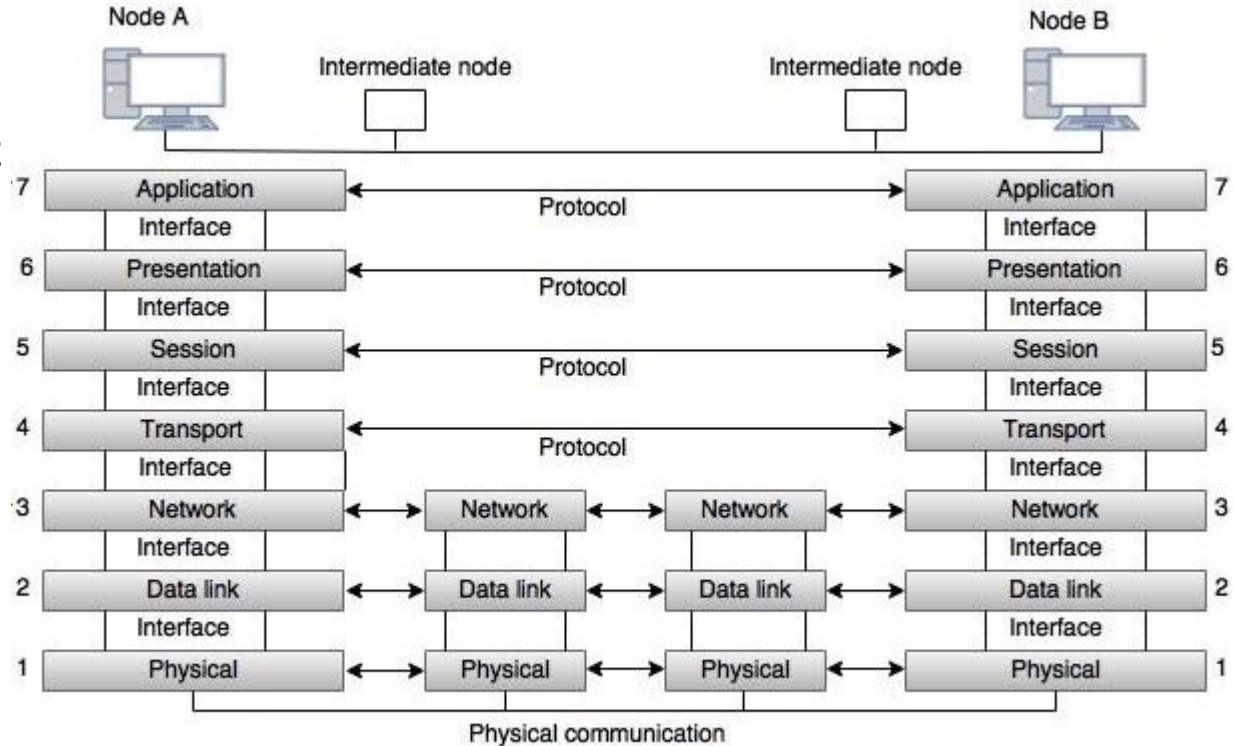

Fig: OSI Model

SER 321

OSI Model - Middleware

Yeah that's what we've been doing, so what?

Middleware is a set of services that allow us to *target methods on the server directly*

Intro to Middleware [video](#)

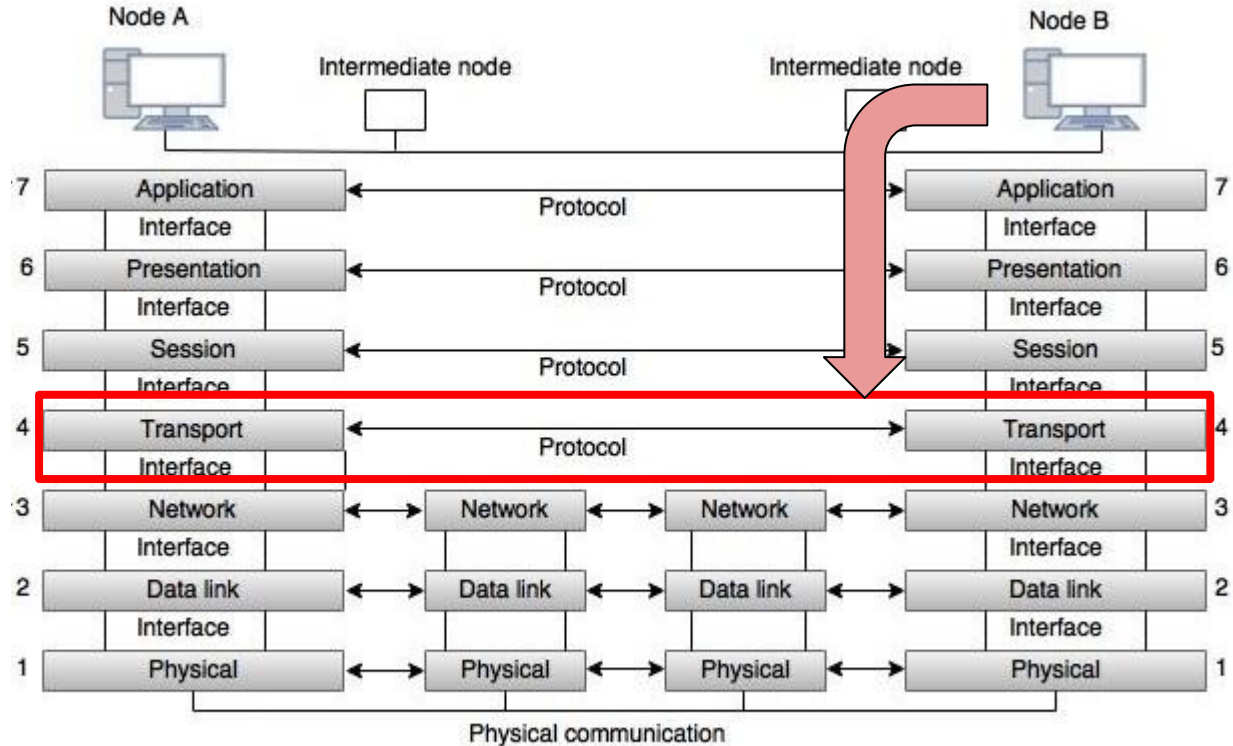

Fig: OSI Model

SER 321

OSI Model - Middleware

Yeah that's what we've been doing, so what?

Middleware is a set of services that allow us to *target methods on the server directly*

It handles the formatting and transmission of data for us!

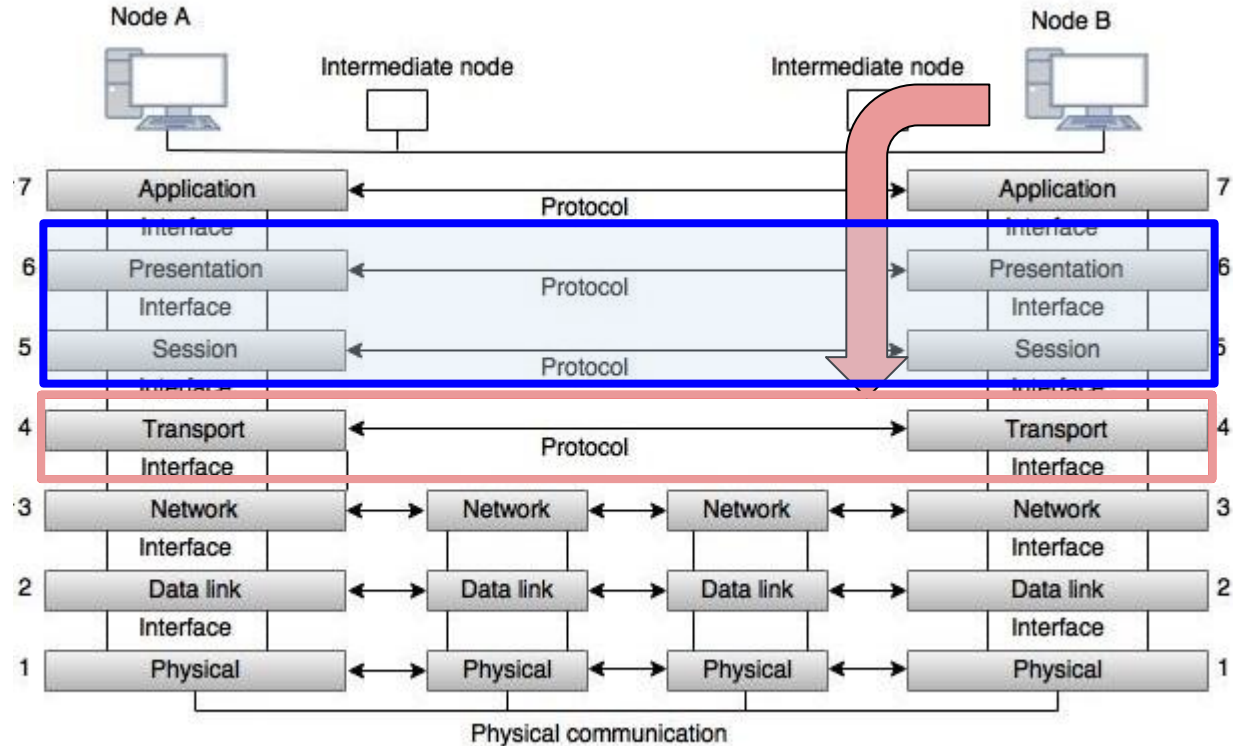

Fig: OSI Model

SER 321

Middleware

Essentially defines a common interface for communication with the server

Want to talk to the server?

Use middleware to avoid the overhead!

Enables flexibility and portability in terms of usage

Language independent

Increased scalability - any system can join the network

Can you think of examples?

- RPC
- MOM
- API

SER 321

This Assignment

Working with Protobuf again - very similar to the steps in Assignment 4

Will use a *builder* to construct the request or response, and use **.build()** when done

BUT the transmission
handling is different!

Will use a *StreamObserver*
to work with the stream

Everything else is
handled for you!

```
@Override
public void getJoke(JokeReq req, StreamObserver<JokeRes> responseObserver) {

    System.out.println("Received from client: " + req.getNumber());
    JokeRes.Builder response = JokeRes.newBuilder();
    for (int i=0; i < req.getNumber(); i++){
        if(!jokes.empty()) {
            response.addJoke(jokes.pop()); // yes, I take the joke out when it was used already
        }
        else {
            response.addJoke(value: "I am out of jokes..."); // this is more of a hack
            break;
        }
    }

    JokeRes resp = response.build();
    responseObserver.onNext(resp);
    responseObserver.onCompleted();
}
```

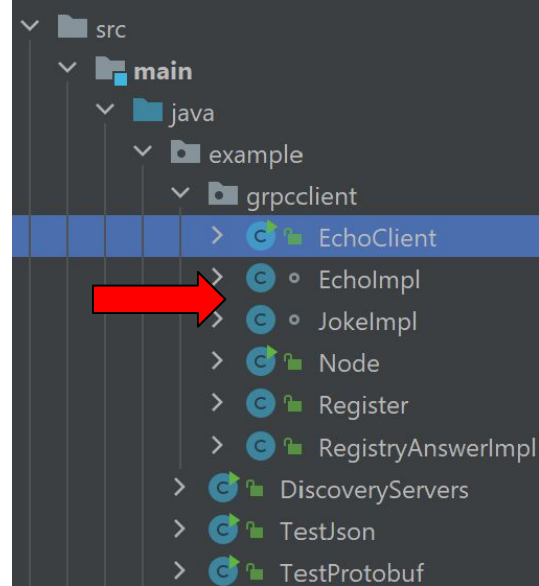

SER 321

This Assignment

The Implementation files hold the services you are providing

How do you provide the services to the client?

```
private void start() throws IOException {  
    /* The port on which the server should run */  
    // Here we are adding the different services that a client can call  
    ArrayList<String> services = new ArrayList<>();  
    server = ServerBuilder.forPort(port) ServerBuilder<capture of ?>  
        .addService(new EchoImpl()) capture of ?  
        .addService(new JokeImpl())  
        .addService(new RegistryAnswerImpl(services)).build().start();  
}
```

SER 321

This Assignment

```
public void askServerToParrot(String message) {  
      
    try {  
          
    } catch (Exception e) {  
        System.err.println("RPC failed: " + e.getMessage());  
        return;  
    }  
    System.out.println("Received from server: " + response.getMessage());  
}
```

What about the client? How do we *use* these services?

We build the request that we want to send

Call the server method with a *blockingStub*

Waits for the server to give response or exception

SER 321

This Assignment

```
// create client  
EchoClient client = new EchoClient(channel, regChannel);
```

The client uses a *channel* to communicate the server

And we create a blocking stub using the channel

2 usages

```
private final EchoGrpc.EchoBlockingStub blockingStub;
```

3 usages

```
private final JokeGrpc.JokeBlockingStub blockingStub2;
```

4 usages

```
private final RegistryGrpc.RegistryBlockingStub blockingStub3;
```

2 usages

```
private final RegistryGrpc.RegistryBlockingStub blockingStub4;
```

```
public EchoClient(Channel channel, Channel regChannel) {  
    // 'channel' here is a Channel, not a ManagedChannel, so it is  
    // responsibility to  
    // shut it down.  
  
    // Passing Channels to code makes code easier to test and makes it easier to  
    // reuse Channels.  
    blockingStub = EchoGrpc.newBlockingStub(channel);  
    blockingStub2 = JokeGrpc.newBlockingStub(channel);  
    blockingStub3 = RegistryGrpc.newBlockingStub(regChannel);  
    blockingStub4 = RegistryGrpc.newBlockingStub(channel);  
}
```

SER 321

Summary

What is middleware?

-

Katie's thoughts:

An interface for communication between client and server. Client is able to make method calls “directly” to the server and obtain results.

Questions?

Upcoming Events

SI Sessions:

- Sunday October 1st 2023 at 6:00 pm MST

Review Sessions:

- I'm leaning towards planning our Review Session for Sunday or Monday

Academic Support

Academic Support Network (ASN) provides a variety of free services in-person and online to help currently enrolled ASU students succeed academically.

Services

Subject Area Tutoring

Need in-person or online help with math, science, business, or engineering courses? Just hop into our Zoom room or drop into a center for small group tutoring. We'll take it from there.

[Need help using Zoom?](#)

[View the tutoring schedule](#)

 **Academic Support Network**

Services Faculty and Staff Resources About Us

University College

Online Study Hub

Online peer communities for students and tutors, YouTube channels, and Tutorbots.

What are online peer communities?

Individual courses have an online peer community that allows you to connect with your peers to post and answer questions and to develop study groups.

How can tutoring center videos help?

Videos can help supplement the learning you're doing in and outside of class and include step-by-step methods for how to understand concepts.

How does the Tutorbot work?

You can ask the Tutorbot questions about course concepts and the Tutorbot will recommend additional resources and examples to help address your questions.
