

SER 321 B Session

SI Session

Sunday, April 1st 2024

7:00 pm - 8:00 pm MST

Agenda

Handling Client Connection

Using Threads

Threading Pitfalls

SI Session Expectations

Thanks for coming to the **SER 321** SI session. We have a packed agenda and we are going to try to get through as many of our planned example problems as possible. This session will be recorded and shared with others.

- If after this you want to see additional examples, please visit the drop-in tutoring center.
- We will post the link in the chat now and at the end of the session.
 - tutoring.asu.edu
- Please keep in mind we are recording this session and it will be made available for you to review 24-48 hours after this session concludes.
- Finally, please be respectful to each other during the session.

Interact with us:

Zoom Features

Zoom Chat

- Use the chat feature to interact with the presenter and respond to presenter's questions.
- Annotations are encouraged

SER 321

Server Socket

*Check out the
recording for the
discussion!*

1. Define Params

2. Create Socket

3-5. Mark Socket to Listen

6. Wait for Connection

7. Handle Client Connection

8. Close Client Connection

9. Continue Listening

```
public static void main (String args[]) {  
  
    if (args.length != 1) {  
        System.out.println("Expected arguments: <port(int)>");  
        System.exit( status: 1);  
    }  
  
    try {  
        port = Integer.parseInt(args[0]);  
    } catch (NumberFormatException nfe) {  
        System.out.println("[Port|sleepDelay] must be an integer");  
        System.exit( status: 2);  
    }  
  
    try {  
        //open socket  
        ServerSocket serv = new ServerSocket(port);  
        System.out.println("Server ready for connections");  
  
        while (true){  
            System.out.println("Server waiting for a connection");  
            sock = serv.accept(); // blocking wait  
            System.out.println("Client connected");  
            // ...  
        }  
    }  
}
```

SER 321

Server Socket

What needs to be done here?

- 1. Define Params
- 2. Create Socket
- 3-5. Mark Socket to Listen
- 6. Wait for Connection
- 7. Handle Client Connection
- 8. Close Client Connection
- 9. Continue Listening

- 1
- 2
- 3
- 4
- 5

SER 321**Server Socket**

What needs to be done here?

Check out the recording for the discussion!

Is input
from the client
or
to the client?

1. Define Params

```
// setup the object reading channel  
in = new ObjectInputStream(sock.getInputStream());
```

```
// get output channel  
OutputStream out = sock.getOutputStream();
```

```
// create an object output writer (Java only)  
os = new DataOutputStream(out);
```

1

2

3

4

5

```
clientSock = sock.accept(); // blocking wait  
PrintWriter out = new PrintWriter(clientSock.getOutputStream(), autoFlush: true);  
InputStream input = clientSock.getInputStream();  
System.out.println("Server connected to client");
```

Check out the recording for the discussion!

SER 321

Server Socket

What needs to be done here?

```
static void overandout() {  
    try {  
        os.close();  
        in.close();  
        sock.close();  
    } catch (Exception e) {e.printStackTrace();}  
}  
  
try {  
    s = (String) in.readObject();  
} catch (Exception e) {  
    System.out.println("Client disconnect");  
    connected = false;  
    continue;  
}
```

1 Create input/output streams

2

3

4

5

Check out the recording for the discussion!

SER 321

Server Socket

What needs to be done here?

```
JSONObject res = isValid(s);

if (res.has(key: "ok")) {
    writeOut(res);
    continue;
}

JSONObject req = new JSONObject(s);

res = testField(req, key: "type");
if (!res.getBoolean(key: "ok")) {
    res = noType(req);
    writeOut(res);
    continue;
}
```

```
public static JSONObject isValid(String json) {
    try {
        static JSONObject testField(JSONObject req, String key){
            JSONObject res = new JSONObject();

            // field does not exist
            if (!req.has(key)){
                res.put("ok", false);
                res.put("message", "Field " + key + " does not exist in request");
                return res;
            }
            return res.put("ok", true);
        }
    }
    return res;
}

return new JSONObject();
}
```

Check out the recording for the discussion!

SER 321

Server Socket

What needs to be done here?

```
int numr = input.read(clientInput, off: 0, bufLen);
```

```
String received = new String(clientInput, offset: 0, numr);  
System.out.println("read from client: " + received);  
out.println(received);
```

```
if (req.getString(key: "type").equals("echo")) {  
    res = echo(req);  
} else if (req.getString(key: "type").equals("add")) {  
    res = add(req);  
} else if (req.getString(key: "type").equals("addmany")) {  
    res = addmany(req);  
} else {  
    res = wrongType(req);  
}  
writeOut(res);
```

1 Create input/output streams

2 Check for disconnect

3 Check Protocol

4

5

Academic Support

Academic Support Network (ASN) provides a variety of free services in-person and online to help currently enrolled ASU students succeed academically.

Services

Subject Area Tutoring

Need in-person or online help with math, science, business, or engineering courses? Just hop into our Zoom room or drop into a center for small group tutoring. We'll take it from there.

 **Academic Support Network**
Services Faculty and Staff Resources About Us

University College

Online Study Hub

Online peer communities for students and tutors, YouTube channels, and Tutorbots.

What are online peer communities?

Individual courses have an online peer community that allows you to connect with your peers to post and answer questions and to develop study groups.

How can tutoring center videos help?

Videos can help supplement the learning you're doing in and outside of class and include step-by-step methods for how to understand concepts.

How does the Tutorbot work?

You can ask the Tutorbot questions about course concepts and the Tutorbot will recommend additional resources and examples to help address your questions.
